

TV Feeder Inc.

Mobile AI Smart TV

TV Feeder Solution

- The most advanced website ever created
- Smart TV control for any connected screen to easily choose any information
- Productivity to schedule switching windows and saving favorites lists
- Lightweight display screen is a mobile cloud supercomputer
 - Replaces slow and heavy personal computers
- Video conferencing telephone communication
 - Replaces phone calls, voicemails, emails, and text messages with video calls, video mail, and video messages
- Social media profile and contacts home screen
 - Enable video calls and replace phone numbers and email addresses

Decentralized Telecommunications

- DeTelco to tokenize networking exchange points
 - Networking infrastructure is decentralized peer to peer
 - Internet users own the hardware
 - Unlike old way of “big telco” routing communications through a centralized switchboard and branch trunk exchange (PBX) system of internet service providers (ISPs)
- Streaming AI GPUs
- Video messaging
- Global lightspeed networking
- Cloud supercomputing
- Smart Cities
 - Devices and smart vehicles are nodes in a wireless mesh network

Decentralized Streaming Media

- DeMedia to tokenize media ownership for content creators
 - Content distribution is decentralized with creator to fan monetization
 - Unlike old way of “big tech” data centers and “big media” production studios and record labels controlling the media and content deliver networks (CDNs) leading to suppression of free speech, bias, fake news, propaganda, and political influence
- NFT media content and virtual event tickets
 - DJs, musicians, comedians, live performances, artists, galleries, nightclubs, concert venues

Decentralized Advertising

- DeAdvertising to tokenize small businesses to advertise to their customers
 - Unlike old way of “big advertising” outbidding small businesses
- Local businesses increase advertising effectiveness with targeted audiences
- Anyone can be their own TV channel
- Friends and favorite businesses can be their own commercials
 - More local and targeted advertising helps small businesses and the local economy

Decentralized Device Hardware

- DeDevice to tokenize device manufacturers
 - Devices run all software regardless of screen size
 - Remote control, gamepad, touchscreen, keyboard and mouse, or voice controls all interact
 - Unlike old way of “big tech” device manufacturers locking you into a hardware ecosystem
- Interconnect all screens
 - Smartwatches, smartphones, tablets, computers, smart TVs, smart glasses, and smart vehicles
- Big screen TVs easily browse websites and switch favorites tabs
- Easy login, sign in, and payment using digital ids

Decentralized App Development

- DeApps to tokenize app developers
 - Apps work on all platforms
 - Unlike old way of “big tech” operating systems locking you into software ecosystems which require specific hardware, significant software development costs, and lock people into a relationship with a specific app store

Decentralized Game Development

- DeGaming to tokenize game developers
 - Video games work on all screens
 - Unlike old way of “big gaming” consoles forcing you to buy multiple systems
- Cloud video game streaming to play any game anywhere
 - Replace gaming consoles and gaming PCs
 - Any controller can be used
- Game developers sell direct to players
